# Security

Security measures taken to protect your website from cyberattacks, hackers, malware, scams or phishing, and errors.

## SSL is installed

SSL certificates are what enable websites to use HTTPS, which is more secure than HTTP.

## Website is up to date with WordPress version

Updating to the latest version of WordPress helps to keep your website bug-free and more resilient to security vulnerabilities.

## No malware was found

Website is safe and secured from malicious activities that can compromise confidential data.

# Backups

A backup is a copy of your website. If something goes wrong with your site, you can use this backup to restore it without starting over from scratch.

## Backups created: 0

It's recommended to have more backups in case you need to restore your website database.

## Frequency: Weekly

Important data should be backed up at least once a week.
